PROFESSIONAL SUMMARY

Business Data Analyst with 2+ years of experience working closely with product owners and stakeholders to understand what they need from data and deliver it. Background spans e-commerce, retail analytics, and healthcare and life sciences, which helps in quickly understanding the domain context behind a data request. Day-to-day work has been a mix of Power BI dashboards, SQL, ad-hoc analysis, and turning messy requirements into sprint-ready stories in Agile/SAFe teams. Comfortable presenting findings to senior leadership, managing competing priorities, and working independently. Tools used regularly include Power BI, Tableau, SQL, Snowflake, and Python.

CORE COMPETENCIES

BI & Reporting: Power BI (DAX, RLS, Drill-Through, Time Intelligence, Service), Tableau, Excel, KPI Design

Data & SQL: SQL, T-SQL, Snowflake, SQL Server, Query Optimization, SSIS/ETL, Star-Schema Warehousing

Agile Delivery: SAFe/Agile, Epics, User Stories, Acceptance Criteria, Sprint Planning, UAT, Risk Tracking

Communication: Stakeholder Presentations (PPT), Requirements Documentation, Runbooks, Escalation Management

Programming: Python (Pandas, NumPy), SAS, Statistical Analysis, Data Validation

Domain Knowledge: E-commerce & Retail Analytics, Healthcare & Life Sciences, Clinical Research, Sales & Customer Analytics

Tools: Jira, Power Automate, Git, SSRS, APIs

PROFESSIONAL EXPERIENCE

Business Data Analyst | **Cozy Systems** | Cumming, GA *Apr 2025 – Dec 2025*

- Worked with product owners and business teams to turn vague data asks into documented requirements with clear KPIs, scope, and success criteria, then translated those into user stories and backlog items for the sprint team.
- Managed a high volume of ad-hoc reporting requests daily; triaged and prioritized incoming asks, set turnaround commitments, and kept stakeholders informed on progress.
- Built and maintained Power BI dashboards for an e-commerce client covering KPI tracking, drill-through analysis, time-intelligence forecasting, and RLS; worked with BI developers to move one-off reports into repeatable, scheduled cycles.
- Owned requirements and validation for recurring weekly and monthly reports; wrote runbooks to make the process repeatable across the team.
- Coordinated UAT cycles and releases by tracking dependencies, flagging risks early, and communicating updates to stakeholders ahead of go-live.
- Presented analytical findings to senior leadership in PowerPoint, focusing on the business insight rather than the data mechanics.

Data & BI Analyst | **Cozy Systems** | Chennai, India *Nov 2023 – Aug 2024*

- Built a SQL Server data warehouse from scratch using a star schema for a retail business, pulling in data from several disconnected sources that became the single source of truth for reporting across the business.
- Wrote T-SQL stored procedures and SSIS packages to move and transform data reliably, with logging and error handling so issues were easy to trace and fix when they came up.
- Set up Power BI datasets with DAX measures and defined relationships that let business users build their own reports without needing to come back to the data team for every change.
- Worked with stakeholders to align on KPI definitions and dashboard standards and did a round of SQL query tuning that brought report load times down by around 30%.

Research Data Analyst Intern | **Brigham and Women's Hospital, Harvard Medical School** | Boston, MA*Apr 2023 – Oct 2023*

- Cleaned and validated clinical imaging datasets to make sure the data going into analysis was accurate and properly documented, as errors in research data have real downstream consequences.

- Compiled research findings into summaries and slide presentations for the clinical team, translating technical results into clear narratives for a non-technical audience.

PROJECTS

Power BI Sales & Orders Executive Dashboard | Power *BI, DAX, SQL* *Aug – Dec 2024*

- Built an executive dashboard covering revenue trends, margin analysis, customer segmentation, and forecasting for an enterprise client. Optimized the DAX, set up automated refresh, and created reusable templates; reporting turnaround dropped by 35%.

Python ETL Pipeline – Customer & Sales Data | Python*, Pandas, NumPy* *Apr – Aug 2025*

- Wrote an end-to-end ETL script that ingested 1,000+ customer records and 1,200+ sales transactions, cleaned up messy data issues like missing fields, duplicates, and bad dates, and output four clean tables ready for reporting and Power BI.

FHIR Bulk Data Ingestion Pipeline | Python*, MongoDB, PyMongo, NDJSON, Pandas* *Jan – May 2025*

- Built a Python-based ingestion pipeline to load bulk FHIR healthcare datasets into MongoDB, handling 10 FHIR resource types including Patient, Observation, Condition, and Encounter. Structured for downstream clinical dashboards and analytics applications.

Healthcare Quality Improvement – Data-Driven Study | QI *Methodology, Run Charts, PDSA Cycles* *Aug – Dec 2024*

- Applied formal healthcare QI methods to design a measurable improvement study, defining outcome and process measures, tracking data weekly using run charts, and running PDSA cycles to test and evaluate changes. Delivered findings as a structured QI presentation.

Student Performance Analysis | SAS*, Regression, Clustering* *Aug – Dec 2024*

- Ran a full analysis in SAS across 15 variables covering data cleaning, regression, correlation, and FASTCLUS clustering, and found that parental education and study time were the strongest predictors of student outcomes. Packaged the results into a clean PDF report.

EDUCATION

Master of Science, Biomedical Data Science & Informatics *Aug 2024 – Dec 2025*

Clemson University, Clemson, SC | GPA: 3.75 / 4.0

Bachelor of Biomedical Sciences (Hons.) *Aug 2019 – Feb 2024*

Sri Ramachandra Institute of Higher Education and Research, Chennai, India

PUBLICATION

Fertility and Sterility | *December 2024*

Mitsunami, M., Kandula, H., ... **Gnanasambhandam, S**., et al.

Point-of-care fertility diagnostics, clinical imaging analysis, and CNN-based diagnostic model validation.
